Add. - 19-20A, SARVODAYA NAGAR, AWADHPURI, Lucknow, UP- 226016 GSTIN-09ADNPA7771N1ZV
Fabrication Units (for each unit)	Address	Factory Address - Khasra No. 844, Kali Paschim, Near SGPGL, Raebareli Road, Lucknow, Uttar Pradesh-226301 Email - info@tradersarjit.com Contact No. - 9917518631
Fabrication Units (for each unit)	Facilities including details of Machinery & Plants as applicable (Brief description and Photographs)	* Template Layout area- 1500 Sq. mtr. * Fabrication Shop- Cutting, Drilling, Welding, Straightening, End Milling- 3600 Sq. Mtr. * Blasting Shop- 500 Sq. Mtr. * Metallizing & Painting Shop- 480 Sq. Mtr. * Assembly area- 1800 Sq. Mtr. * Stacking area- 3500 Sq. Mtr. * Any other facility/area/shop- Store/office- 800 Sq. Mtr.
Fabrication Units (for each unit)	Facilities including details of Machinery & Plants as applicable (Brief description and Photographs)	• Template layout area- 1500 Sq. Mtr. 

Fabrication shop- Cutting, Drilling, Welding, Straightening, End Milling -
1 - Pug Cutting Machine - Used for flame cutting of MS plates and structural steel. The pug cutting machine ensures accurate straight-line and profile cutting of plates required for bridge girders, gusset plates, stiffeners, and other fabricated components. It improves cutting efficiency while maintaining dimensional accuracy.

Fabrication Units
(for each
unit)

Facilities including details of
Machinery & Plants as applicable
(Brief description and Photographs)

2. CNC Cutting Machine.
The CNC cutting machine is utilized for high-precision cutting of MS plates with complex profiles. It ensures uniformity, repeatability, and reduced material wastage. This machine is ideal for producing intricate components used in bridge fabrication as per approved drawings.

Fabrication Units (for each unit)	Facilities including details of Machinery & Plants as applicable (Brief description and Photographs)	3. CNC Drilling Machine Used for precise drilling of bolt holes in plates, angles, channels, and girders. CNC drilling ensures exact hole alignment, spacing, and tolerance, which is critical for proper fit-up during site erection. 
Fabrication Units (for each unit)	Facilities including details of Machinery & Plants as applicable (Brief description and Photographs)	4. Radial Drilling Machine- 06 Nos A heavy-duty drilling machine used for drilling large-diameter holes in thick plates and fabricated members. Suitable for components requiring flexibility in drilling positions and handling large structural sections. 

Fabrication Units (for each unit)	Facilities including details of Machinery & Plants as applicable (Brief description and Photographs)	5. Magnetic Core Cutting Machine- 25 Nos Used for efficient hole cutting in structural steel members. This machine provides smooth and accurate hole finishing and is especially useful for on-site or shop drilling where conventional drilling is difficult. 
Fabrication Units (for each unit)	Facilities including details of Machinery & Plants as applicable (Brief description and Photographs)	6. MIG Welding Machines- 70 Nos Metal Inert Gas (MIG) welding machines are used for high-quality welding of structural steel components. MIG welding ensures strong weld joints, better penetration, and higher productivity, making it suitable for bridge fabrication works. 

Fabrication Units (for each it)	Facilities including details of Machinery & Plants as applicable (Brief description and Photographs)	7. SAW Welding Machines (Submerged Arc Welding)- 06 Nos SAW welding machines are used for heavy structural welds, particularly in girders and long seam welding. This process provides deep penetration, uniform weld quality, and high deposition rates, ensuring strength and durability of welded joints 
Fabrication Units (for each unit)	Facilities including details of Machinery & Plants as applicable (Brief description and Photographs)	8. Straightening Machine Used for straightening distorted plates and structural members after cutting or welding operations. This machine ensures components meet dimensional and alignment tolerances before further processing or assembly. 

Fabrication Units (for each unit)	Facilities including details of Machinery & Plants as applicable (Brief description and Photographs)	9. End Milling Machine End milling machines are used to achieve precise end finishes of girders, beams, and columns. This ensures proper mating surfaces during assembly and erection of steel bridge components. 
Fabrication Units (for each unit)	Facilities including details of Machinery & Plants as applicable (Brief description and Photographs)	10. H-Beam Welding Machine Specialized machine used for automatic welding of H-beams and built-up sections. It ensures consistent weld quality, accuracy, and strength for primary load-bearing members used in bridge Structure. 

Fabrication Units (for each unit)	Facilities including details of Machinery & Plants as applicable (Brief description and Photographs)	11. Blasting Shop A dedicated blasting facility used for surface preparation of steel components. Grit/shot blasting removes rust, mill scale, oil, and contaminants to achieve the required surface cleanliness before metallizing or painting, ensuring proper coating adhesion. 
Fabrication Units (for each unit)	Facilities including details of Machinery & Plants as applicable (Brief description and Photographs)	12. Metallizing Shop Equipped for thermal spray metallizing processes (such as zinc/aluminum coating) to protect steel surfaces from corrosion. Metallizing enhances durability and extends service life of steel bridge components, especially in aggressive environments. 

Fabrication Units (for each unit)	Facilities including details of Surface Comparator SA2.5

	Facilities including details of Machinery & Plants as applicable (Brief description and Photographs)	13. Painting Shop A controlled painting facility used for application of primer, intermediate, and finish coats as per project specifications. The shop ensures uniform coating thickness and high-quality surface finish. 
	Facilities including details of Machinery & Plants as applicable (Brief description and Photographs)	14. Assembly Area A designated area for trial assembly and fit-up of fabricated components. This helps verify alignment, bolt hole matching, and overall geometry before dispatch to site, minimizing erection issues. 

Fabrication Units (for each unit)	Facilities including details of Machinery & Plants as applicable (Brief description and Photographs)	15. Stacking Area A well-planned stacking and storage area for finished and semi-finished components. Materials are stored systematically to avoid damage, ensure traceability, and facilitate easy loading and transportation. 
Fabrication Units (for each unit)	Facilities including details of Machinery & Plants as applicable (Brief description and Photographs)	16. Overhead Lifting Cranes- 03 Nos with capacity of 20 MT (each) Overhead lifting cranes are installed in fabrication and assembly areas for safe and efficient handling of heavy plates, girders, and fabricated steel components. These cranes facilitate smooth movement of materials between cutting, welding, assembly, and stacking areas, reducing manual handling and improving productivity and workplace safety. 

Fabrication Units (for each unit)	Facilities including details of Machinery & Plants as applicable (Brief description and Photographs)	17. Farana- 08 Nos The Farana crane is used for heavy lifting and material handling operations, especially for large and long structural members. It supports assembly, stacking, loading, and erection works, ensuring efficient handling of oversized components and improving overall operational efficiency.  The photograph shows a yellow Escorts F23 Farana crane in operation at a fabrication unit. The crane's boom is extended, and its hook is lifting a large, dark-colored steel beam. The beam is being moved over a stack of similar steel beams. In the background, there is a white building with a corrugated metal roof, a tall lattice tower, and a clear blue sky. The ground is dirt and covered with various steel components and debris.
